

Care and maintenance of the fabrics

General information:

The fabrics are designed with the intention to be strong, durable and resistant. The water resistant finishing further improves the performance characteristics so that the fabrics are stain repellent, easy to clean and require a minimal but constant maintenance.

AGORA:

Basic tips:

 Clean Agora® fabrics with neutral soap in lukewarm water. Do not dry-clean water: we recommend to clean at a temperature of no more than 30°.

 Do not dry-clean.

 Iron at low temperature.

 Air dry: do not use a clothes dryer.

 Bleach may be used, in moderation: chlorine bleach will not affect the coloration of the solution-dyed acrylic fiber and it is for this reason acceptable for stubborn stain removal, including mildew. Chlorine bleach, strong chemicals or detergents will eventually affect the strength of any fiber or cloth, so it is better to use a diluted solution of one part bleach to twenty parts water.

Care:

- Do not expose laminated side to UV rays or direct sunlight or any atmospheric agents.
- Washing in washing machine, delicate program, 30°C.
- Do not tumble dry.
- Clean stains with cloth or sponge moistened with a neutral soap solution, always on the fabric side.
- In case of stubborn stains a solution of < 5% bleach may be used instead.
- Do not dry clean nor use perchloroethylene.
- Iron on the fabric side only. Do not iron on the laminated side.
- Do not use pressure washers (Karcher type) on fabric. It may damage the lamination and/or peel it off.

HERITAGE:

How to clean:

Wet the fabric in a mild soap solution with warm water. Use a sponge or soft-bristled brush to lightly agitate the stain. Afterwards, rinse thoroughly to remove all soap residue, and allow the fabric to air dry.

Machine wash:

Some removable covers can be washed in the washing machine; However, check with the furniture manufacturer before removing the cover as mattress construction may vary. To wash, first close all zippers. Machine wash cold on delicate cycle with normal amount of mild laundry detergent. Let the fabric air dry.

Mold and mildew stains:

Our fabrics do not promote mold growth; However, mold may grow on dirt and other foreign substances that are not removed from the fabric. To remove mold or mildew:

- Prepare a solution of one cup of bleach and one-quarter cup of mild soap per 1 gallon (3.8 liters) of water.
- Spray over the entire area and allow the fabric to soak for about 15 minutes. Clean the entire surface with a sponge, dry towel or a very soft bristle brush.
- Rinse very well to remove all soap residue.
- Let air dry.

Oily stains:

Immediately apply an absorbent such as cornstarch directly to the oily stain. Let it sit for 10 minutes and remove the excess with a straight edge or ruler. This helps remove the stain and prevents it from penetrating the fabric. Then continue with the cleaning process.

SPRADLING:

Coated fabrics require periodic cleaning to maintain their appearance and prevent the buildup of dirt and contaminants. Any stain, spill or dirt must be cleaned immediately after production to avoid the possibility of creating a permanent stain. Use a mixture of liquid soap (pH neutral) and water, or approved cleaners for our coated fabrics, to remove stains on the surface of the material. Remove only with a damp white cloth. Lacquers, strong cleaners, detergents, cleaning solutions containing xylene, ketones (MEK) or acetates cause immediate damage and contribute to the deterioration of the material. Use of these cleaners is at the owner's risk.

Dayli cleaning:

Clean the entire surface using a 1:9 mixture of liquid soap and water. Do not use soaps or cleaning solutions that contain alcohol, ketones, xylene, acetates, or solvents (mineral/white spirits).

Completely remove excess mixture with a clean, damp white cloth. Dry the surface.

After cleaning, always rinse the area with water and dry with a clean, lint-free cloth. If chemical residues are not completely removed, they could cause discoloration of the fabric surface, thus causing this phenomenon to occur earlier in the product's life cycle.

Severe stains:

Step 1: Coffee, juice, red wine, sauces, chocolate, grease, pencil and tanning creams. Remove excess pour with a damp cloth. Clean with a 1:9 mixture of neutral liquid soap and water. Then rinse it with water and dry it.

Step 2: Makeup. Use neutral pH soap directly. Wipe with a clean cloth or soft bristle brush, rinse with water and dry.

Step 3: Blood, urine, feces and other more severe stains. Use a 1:10 mixture of isopropyl alcohol and water. Rinse it thoroughly with clean water and dry it.

Note: To clean, use a soft white cotton cloth soaked with the recommended cleaning agent and rub the stain 10 times in circles. Dry it with another soft white cotton cloth and check the results. Do not use metal bristle brushes or abrasive or metallic fiber sponges, as these can cause permanent damage to the fabric. Methods 2 and 3 are not recommended for daily cleaning.

BATYLINE:

Batyline fabrics must absolutely be used in the scope of an adapted furniture application considering the technical limits of the textiles.

Numerous soil tests have been carried out in the laboratory to ensure the ease of cleaning of the product: red wine, sun cream, chocolate, mustard, ketchup, vinegar. Stains, even embedded ones, can be easily cleaned with soapy water and a cloth.

An immediate checking or cleaning procedure may be necessary following a sudden incident. For instance, to maintain a fabric clean, sunscreen, wine, coffee etc stains need to be cleaned right away. Please follow the stain guide to know the cleaning procedure.

Cleaning recommendations:

We recommend the use of Serge Ferrari Cleaner 500 for cleaning and maintaining BATYLINE membranes.

- For usual cleaning with a vacuum cleaner and a metallic brush and dust off the fabric surface.
- Spray the fabric with Cleaner 500.
- Let the product act for 2-3 minutes
- Using a soft brush, scrub continuously in circular motions
- Let it act for another minute
- Rinse with plenty of water to avoid white spots
- Dry with a clean cloth

Uncreasing the fabric:

To uncrease the Batyline Elios fabric, we recommend using a steamer. Apply the steamer 10 cm away from the product and then brush it with a soft brush. Do not iron the Batyline products, this would cause irreparable damage.

Forbidden:

The following is forbidden:

- Cleaning procedures such as: Abrasive products of all kind like abrasive detergent powders, pastes, liquids, sponges... Pressurized water (Karcher).
- Use of organic products such as: Acetone, fuel, benzene, gas oil, fossil fuel, perchlorethylene, turpentine, toluene, trichlorethylene, petroleum.
- Use of non organic chemical products such as: ammonia, nitric acid, sulfuric acid, hydrochloric acid, soda, caustic soda, bleach

KANTHA:

Trevira:

Mariaflora fabrics in Trevira can be washed by hand and in the washing machine with a 30°C cycle, a neutral detergent and low spin.

Air dry. We do not recommend using electric dryers. We do not recommend treatment with bleach or harsh chemicals, as they would damage the fabric. In case of stubborn stains we always recommend dry cleaning.

Trevira Outdoor:

Mariaflora's Trevira Outdoor technology offers protection against stains and water thanks to special finishes.

For ordinary maintenance, we recommend vacuuming the fabrics and frequently removing any residues. It is important to intervene promptly on stains, dabbing the surface of the fabric with a clean sponge, warm water and a neutral detergent.

Rinse thoroughly with clean water.

Air dry. Mariaflora Trevira Outdoor fabrics can be washed by hand and in the washing machine with a 30°C cycle, a neutral detergent and low spin. Air dry.

We do not recommend the use of electric dryers. We do not recommend treatment with bleach or harsh chemicals, as they would damage the fabric. In case of stubborn stains we always recommend dry cleaning.

Bleachable:

Mariaflora fabrics can be treated with bleach without damaging their color. We recommend using a solution of bleach and water diluted in equal parts to avoid damaging the properties of the fabric. After treatment, rinse thoroughly with clean water and leave to air dry away from sunlight.

OGO is a brand of 1Tapiza S.L.
